

#### Statement:

This program calculates how much each person living in a room or flat has to pay.

It takes inputs such as rent, food expenses, electricity usage, charge per unit, and the number of persons sharing the accommodation.

Finally, it computes the total cost and divides it equally among all persons.

#### Key Features:

- Takes user inputs for rent, food cost, electricity units, and charge per unit.
- Calculates total electricity bill using units and per-unit charge.
- Adds rent, food cost, and electricity bill to compute total expenses.
- Divides the total amount equally among all persons.
- Displays the final payable amount per person.
